

Configuring Windows PowerShell and Working with Basic Commands

Steps to Create and Run Scripts in PowerShell

1. Open any text editor and save your file as Filename.ps1.
2. Edit your script.
3. In the PowerShell terminal, execute the script as shown below:

```
.\Filename.ps1
```

Basic Commands

cd C:\Windows\System32

Navigates to the specified directory.

Get-Process

Lists all running processes.

Stop-Process -Name notepad

Stops the Notepad process.

Get-ChildItem C:

Lists all files and directories in the C: drive.

Copy-Item C:\temp\file.txt C:\backup

Copies a file to the backup directory.

Remove-Item C:\temp.txt

Deletes a file.

Get-Content C:\temp\log.txt

Displays the contents of a text file.

Set-Content C:\temp\newfile.txt "Hello, World!"

Writes text to a file.

A Simple PowerShell Script to Greet the User

```
Write-Host "Hello World!"
```
