

02. Working with Objects and Controlling Program Flow

Aim

To understand PowerShell objects and use if, switch, while, for, and foreach control structures.

Working with Objects

```
$processes = Get-Process  
$processes | ForEach-Object { $_.Name }
```

if Statement

```
$age = 20  
if ($age -ge 18) {  
    Write-Host "Adult"  
} else {  
    Write-Host "Minor"  
}
```

switch Statement

```
$day = "Monday"  
switch ($day) {  
    "Monday" { Write-Host "Start of the week" }  
    "Friday" { Write-Host "Almost weekend" }  
    "Saturday" { Write-Host "Weekend" }  
    "Sunday" { Write-Host "Weekend" }  
    default { Write-Host "Regular day" }  
}
```

while Loop

```
$count = 1  
while ($count -le 5) {  
    Write-Host "Count: $count"  
    $count++  
}
```

for Loop

```
for ($i = 1; $i -le 10; $i++) {  
    Write-Host $i  
}
```

foreach Loop

```
$students = "Anil", "Rahul", "Sneha", "Priya"  
foreach ($student in $students) {  
    Write-Host "Student: $student"  
}
```

Exercise

- Write a script to check whether a number is positive, negative, or zero.
- Use a switch statement to display a message for each day of the week.
- Use a for loop to display numbers from 1 to 20.
- Use foreach to display the names of five students.
