

05. Working with WMI and CIM

Aim

To retrieve Windows system information using WMI and CIM commands.

Operating System Information

```
Get-CimInstance Win32_OperatingSystem
```

```
Get-CimInstance Win32_OperatingSystem | Select-Object Caption, Version, OSArchitecture
```

Computer Information

```
Get-CimInstance Win32_ComputerSystem | Select-Object Manufacturer, Model, TotalPhysicalMemory
```

Processor Information

```
Get-CimInstance Win32_Processor | Select-Object Name, NumberOfCores, MaxClockSpeed
```

Disk Information

```
Get-CimInstance Win32_LogicalDisk | Select-Object DeviceID, Size, FreeSpace
```

Legacy WMI Example

```
Get-WmiObject Win32_OperatingSystem | Select-Object Caption, Version
```

Get-CimInstance is generally preferred for modern PowerShell administration.
