

07. Using the Native PowerShell Console and Integrated Script Editor

Aim

To use the PowerShell console, obtain command help, discover commands, and create basic PowerShell scripts.

PowerShell Console

```
$PSVersionTable  
Get-Help Get-Process -Examples  
Get-Command *Service*
```

Script Example

```
Write-Host "Computer Name: $env:COMPUTERNAME"  
Write-Host "User Name: $env:USERNAME"  
Get-CimInstance Win32_OperatingSystem | Select-Object Caption, Version  
Save the commands as systeminfo.ps1 and run them using:
```

```
.\systeminfo.ps1
```

Note: Windows PowerShell ISE is available with Windows PowerShell 5.1 on supported Windows versions.

PowerShell 7 uses other editors such as Visual Studio Code rather than the legacy ISE.
